ABSTRACT

Topic: ONLINE FARMING ASSISTANT

Farming is one of the main job of most of the people today. There are different types of agricultural forms (Pineapple, vegetables, etc...) in our country. The problem of farmers are the unavailability of different types of tools for several purposes. And another main problem faced by the public that it is very difficult to get a labour for works like rubber taping or works in farmlands etc… For overcome the issues faced by the farmers here implements a new online website system called "ONLINE FARMING ASSISTANT". This system is very helpful for farmers. The main and important feature of this website is that book a labour. It is that if anyone need an urgent labour book a labour by online with fixed wages and go to work. There are many different workers are registered in this website so it is easy to book a labour according to your needs. Next there is a facility to book a tool or machine for registered customers according to their need. They can pay the rent amount and the item will be taken as rent for their use. This system is really helpful for farmers. It is a Web application system. The proposed system is developed in Asp.net and by using My SQL as the back end.
